

## Project

---

Create a Dashboard using any frontend and backend technology.

## Requirement:

---

Create a web page like the dashboard in the link. –

<https://public.tableau.com/app/profile/kavin.kumar.g/viz/OnlineRetaildashboard/sales>

## Guidelines

---

- Hard code the data in the charts. You may use any data or copy from the page. APIs to fetch data from a backend will be added advantage. Use any python framework for backend.
- You are free to use any UI technology.
- Use a JavaScript Library such as ChartJs, Highcharts etc for creating charts.
- No Need to create header or footer of the page. Just create the dashboard in full page.
- Background and images need not match with the page. You can use your own.
